

Marlo Stockton RN CEN  
Flight Nurse  
Omniflight/Native Air

I started my career in 1998 as an EMT (Emergency Medical Technician) for a private ambulance company just south of Boston, MA. After 2 years, I progressed to nursing school. 12 years and several specialties later, I went back to my first love of emergency medicine. Working in the emergency room brought me into contact with flight crews and I became intrigued. Having foregone my dream after high school of becoming a commercial airline pilot I thought what a great way to continue my nursing career and start flying!

I researched the career for several months, found a mentor and obtained certifications the flight programs require or encourage. I started my career as a flight nurse in AZ in 2002. I primarily fly in rotor wing aircraft but have had the opportunity to fly fixed wing as well. I am now based in Buckeye, AZ at the Buckeye Valley Fire District. My current certifications include Basic Life Support, Advanced Cardiac Life Support, Neonatal Resuscitation Program, Pediatric Advanced Life Support, Transport Nurse Advanced Trauma Course, Advanced Trauma Care for Nurses, Advanced Life Support in Obstetrics, S.T.A.B.L.E. and I am Certified in Emergency Nursing.

I am a member of the Emergency Nurses Association and the Air and Surface Transport Nurses Association. I enjoy camping and personal watercraft with my husband as well as training my 5 canines in agility and obedience.
